

Dr. Rochlitz Consulting - Consulting for Waste Management and Recycling

Disposal costs are a quite serious cost factor for most companies. Costs for disposal and recycling have risen steadily in recent years. The separate collection of waste fractions, face companies with financial, operational and technical challenges.

Since 2012, Dr. Rochlitz Consulting has been advising companies, mostly with own production facilities. We analyse, evaluate and optimise commercial waste disposal costs for our clients. The goal of our consulting services is a significant reduction of disposal costs.

The amount of cost-intensive "waste for recycling" will be reduced. We identify secondary products in order to introduce them into the cycle for secondary raw materials. For the remaining quantities for "disposal", we check the costs, processes and intervals of collection and accompany our clients in the selection process for a suitable disposal company.

We work sustainable, efficient and always orient ourselves at the company-specific framework conditions of our customers. By concluding the consultation, our clients save money, optimise their processes and make a valuable contribution to their individual ecological footprint. This is sustainable.

For almost 20 years Dr. Alexander Rochlitz - managing director of the consulting firm - has been active in the waste, recycling and secondary raw materials industry. As PhD. economist Dr. Rochlitz was responsible as managing director at Cleanaway, Veolia, Remondis, Sulo and Plastic Omnium. Dr. Rochlitz is accordingly a specialist of the industry, builds on extensive experience and has an excellent network in the international market for secondary raw materials.

Dr. Rochlitz Consulting - specialists for cost efficiency in disposal and sustainable resource management.
